

ATC codes: **C01BA01**

Indication	Cardiac arrhythmia <span>ICD11 code: <b>BC8Z</b></span>
Medicine type	Chemical agent
List type	Complementary
Formulations	Oral > Solid: 200 mg (sulfate)
EML status history	First added in 1977 ( <b>TRS 615</b> ) Changed in 1979 ( <b>TRS 641</b> ) Changed in 1984 ( <b>TRS 722</b> ) Changed in 1987 ( <b>TRS 770</b> ) Removed in 2009 ( <b>TRS 958</b> )
Sex	All
Age	Adolescents and adults
Therapeutic alternatives	Medicines within the same pharmacological class can be used
Patent information	Patents have expired in most jurisdictions Read more <a href="#">about patents</a> .

## Summary of evidence and Expert Committee recommendations

Quinidine was deleted from the complementary list of the EML in 2009. An application was prepared by the Public Health and Pharmacology Department, Weill Medical College of Cornell University, New York, USA, for the deletion of quinidine 200 mg from the Model List. The Committee noted that a recent Cochrane Review (1) and a large multicentre RCT (2) were cited in the application to support the lack of superior efficacy of quinidine over other antiarrhythmic medicines and strategies in prolonging the life of cardiac patients. The Committee recognized that quinidine has many serious adverse effects; it is associated with increased morbidity, risk of QT prolongation and induction of fatal arrhythmias in the adult population. It interacts with a large number of other medicines with potentially fatal consequences, including anti-infectives and antifungals, which are used extensively in developing countries. The Committee accepted that the evidence presented could also apply to procainamide, another class IA antiarrhythmic agent currently on the Model List. The Committee recommended the deletion of quinidine and procainamide from the Complementary Model List because of the lack of evidence of superior efficacy or safety when compared to other antiarrhythmic medicines, and the availability of effective and safer alternatives, on the Model List.
