

Codes ATC: B01AD01

Indication	Acute myocardial infarction Code ICD11: BA41.Z
INN	Streptokinase
Type de médicament	Chemical agent
Type de liste	Liste complémentaire
Formulations	Parenteral > General injections > IV: 1.5 million IU in vial powder for injection
Historique des statuts LME	Ajouté pour la première fois en 1991 (TRS 825) Modifié en 1993 (TRS 850) Modifié en 2003 (TRS 920)
Sexe	Tous
Âge	Adolescents et adultes
Équivalence thérapeutique	La recommandation concerne ce médicament spécifique
Renseignements sur le brevet	Patents have expired in most jurisdictions Lire la suite sur les brevets.

Résumé des preuves et recommandation du comité d'experts

The Committee reviewed an application submitted by Aventis Behring, GmbH, Marburg Germany, to remove the 100000 IU dosage form of streptokinase from the Model List. The Committee noted that the recommended standard dosage for streptokinase's main indication, the treatment of acute myocardial infarction, is 1.5 million IU. The Committee recommended that the dosage form for streptokinase be changed to: powder for injection, 1.5 million IU in vial and that the note, "For use in rare or exceptional circumstances." be removed since its value in treating acute myocardial infarction is now well established and its use is no longer reserved for exceptional situations. The Committee recommended that the dosage form for streptokinase be changed to powder for injection, 1.5 million IU in vial and that the existing footnote, "For use in rare disorders or in exceptional circumstances." be removed.
