

ATC codes: **C08CA05**

Indication	Preterm labour without delivery ICD11 code: JB00.0
INN	Nifedipine
Medicine type	Chemical agent
List type	Core
Formulations	Oral > Solid: 10 mg (immediate-release)
EML status history	First added in 2005 (TRS 933)
Sex	Female
Age	Adolescents and adults
Therapeutic alternatives	The recommendation is for this specific medicine
Patent information	Patents have expired in most jurisdictions Read more about patents . 
Wikipedia	Nifedipine 
DrugBank	Nifedipine 

Summary of evidence and Expert Committee recommendations

An application was received from the UNDP/UNFPA/WHO/World Bank Special Programme of Research, Development and Research Training in Human Reproduction, the WHO Department of Reproductive Health and Research and BMJ Knowledge for the inclusion of nifedipine tablet and capsule 10mg and 20mg, as a tocolytic on the Model List. Comments were received from Médecins Sans Frontières. The Committee noted that there is strong evidence to support the use of nifedipine to inhibit preterm labour. Nifedipine was studied in 10 randomized controlled trials in a Cochrane review (1). The results indicated that, compared with any other tocolytic agent (mainly betamimetics), nifedipine or nicardipine reduced the frequency of neonatal respiratory distress syndrome, necrotizing enterocolitis, intraventricular haemorrhage and neonatal jaundice. The Committee concluded that nifedipine is effective and safe for this indication, and noted that the sublingual route is pharmacologically equivalent to the conventional oral route (1) because the medicine is absorbed low in the gastrointestinal tract. The Committee recommended that nifedipine (10-mg immediate release capsules) be included on the Model List in the subsection of tocolytics. 1. King JF et al. Calcium channel blockers for inhibiting preterm labour.
