

Fourth generation cephalosporins

NOT RECOMMENDED AS AN

ESSENTIAL MEDICINE

Section: 6. Anti-infective medicines > 6.2. Antibacterials > 6.2.2. Watch group antibiotics

EMLc

Codes ATC: En attente

Indication	Other specified bacterial diseases	Code ICD11: 1C4Y
Type de médicament	Chemical agent	
Type de liste	Liste complémentaire (EML) (EMLc)	
Formulations	.	
Historique des statuts LME	Ajouté pour la première fois en 2017 (TRS 1006) Retiré en 2019 (TRS 1021)	
Sexe	Tous	
Âge	Aussi recommandé pour les enfants	
Équivalence thérapeutique	La recommandation concerne ce médicament spécifique

Résumé des preuves et recommandation du comité d'experts

With regard to the EML listing of antibiotics, the Committee endorsed revised criteria for the inclusion of Reserve group antibiotics on the Model List. Namely, Reserve group antibiotics should be included individually on the Model List when they have a favourable benefit-risk profile and proven activity against “Critical Priority” or “High Priority” pathogens as identified by the WHO Priority Pathogens List, most notably carbapenem resistant Enterobacteriaceae. Subsequently, the Committee recommended the removal of aztreonam, fourth- and fifth-generation cephalosporins (as classes), tigecycline and daptomycin from the EML and EMLc as these antibiotics did not meet the revised criteria for inclusion on the Model Lists as individual Reserve group agents. Furthermore, the Committee agreed that fourth-generation cephalosporins should be re-classified as Watch group as they did not meet the criteria for classification as Reserve.
