

Tigecycline

NOT RECOMMENDED AS AN
ESSENTIAL MEDICINE

Section: 6. Anti-infective medicines > 6.2. Antibacterials > 6.2.3. Reserve group antibiotics

EMLc

ATC codes: J01AA12

Indication	Other specified bacterial diseases	ICD11 code: 1C4Y
INN	Tigecycline	
Medicine type	Chemical agent	
Antibiotic groups	<div><div>R</div> RESERVE</div>	
List type	Complementary (EML) (EMLc)	
Formulations	Parenteral > General injections > IV: 50 mg in vial powder for injection	
EML status history	First added in 2017 (TRS 1006) Removed in 2019 (TRS 1021)	
Sex	All	
Age	Also recommended for children	
Therapeutic alternatives	The recommendation is for this specific medicine	
Patent information	Read more about patents .

Summary of evidence and Expert Committee recommendations

With regard to the EML listing of antibiotics, the Committee endorsed revised criteria for the inclusion of Reserve group antibiotics on the Model List. Namely, Reserve group antibiotics should be included individually on the Model List when they have a favourable benefit-risk profile and proven activity against “Critical Priority” or “High Priority” pathogens as identified by the WHO Priority Pathogens List, most notably carbapenem resistant Enterobacteriaceae. Subsequently, the Committee recommended the removal of aztreonam, fourth- and fifth-generation cephalosporins (as classes), tigecycline and daptomycin from the EML and EMLc as these antibiotics did not meet the revised criteria for inclusion on the Model Lists as individual Reserve group agents.
