

		EMLc	ATC codes: J01AA02
Indication	Malaria due to Plasmodium falciparum	ICD11 code: 1F40	
INN	Doxycycline		
Medicine type	Chemical agent		
Antibiotic groups	 ACCESS		
List type	Core (EML) (EMLc)		
Additional notes	For use only in combination with quinine		
Formulations	Oral > Solid: 100 mg (hydrochloride or hyclate) ; 100 mg dispersible tablet (as monohydrate)		
EML status history	First added in 1995 ( <a href="#">TRS 867</a> ) Changed in 1997 ( <a href="#">TRS 882</a> ) Changed in 2003 ( <a href="#">TRS 920</a> ) Changed in 2007 ( <a href="#">TRS 946</a> ) Changed in 2007 ( <a href="#">TRS 950</a> ) Changed in 2011 ( <a href="#">TRS 965</a> )		
Sex	All		
Age	Also recommended for children		
Therapeutic alternatives	The recommendation is for this specific medicine		
Patent information	Patents have expired in most jurisdictions Read more <a href="#">about patents</a> .

## Summary of evidence and Expert Committee recommendations

Both salts (hyclate and hydrochloride) can be used for doxycycline for the curative treatment of malaria.
