Diphtheria-pertussis-tetanus vaccine

NOT RECOMMENDED AS AN ESSENTIAL MEDICINE

Section: 19. Immunologicals > 19.3. Immunologicals > Vaccines

Codes ATC: J07AJ52

Indication	Need for immunization against diphtheria-tetanus-pertussis, combined Code ICD11: QC03.1
Type de médicament	Biological agent
Type de liste	Liste de base
Formulations	All vaccines should comply with the WHO requirements for biological substances.
Historique des statuts LME	Ajouté pour la première fois en 1977 (TRS 615) Retiré en 1999 (TRS 895)
Sexe	Tous
Âge	Adolescents et adultes
Équivalence thérapeutique	La recommandation concerne ce médicament spécifique

Résumé des preuves et recommandation du comité d'experts

The Committee accepted the recommendation of the WHO Department of Vaccines and Biologicals to modify the list of essential vaccines to list the antigens but not the specific vaccine mixtures. The reason is that there are various combination products intended for different groups of people and that listing all of the recommended vaccines would unduly complicate the list. Specific therapeutic recommendations for vaccines containing single antigens or mixtures of antigens are found in the policy statements of the WHO Department of Vaccines and Biologicals.
