Résumé des preuves et recommandation du comité d'experts

In 2005 the Expert Committee requested a review of Section 21 of the WHO Model List of Essential Medicines Ophthalmological preparations. As part of the review, undertaken by Sight Savers International and the VISION 2020 Technology Working Group, an application for inclusion of a new formulation of aciclovir (ophthalmological preparation) and a proposal to delete the listed antiviral ophthalmological medicine idoxuridine was submitted. The proposal was to list aciclovir ointment 3% W/W as a new formulation replacing idoxuridine solution (eye drops), 0.1% and eye ointment, 0.2%. The Committee noted that the application provided a review of the existing evidence for the comparative effectiveness of ophthalmological aciclovir compared to idoxuridine and other topical antivirals for treating epithelial keratitis caused by herpes simplex virus. The public health need for inclusion of a new formulation of aciclovir on the Model List was fully demonstrated. As noted by the expert reviewers, the clinical evidence, based on systematic reviews (1), shows that aciclovir ointment is superior to idoxuridine in both adult and child populations, based on improved healing at 7 days (RR 2.10, 95% CI, 1.27-3.47) and healing at 14 days (RR 1.21, 95% CI, 1.05-1.40). The Cochrane review found that aciclovir appeared to be equivalent to other nucleoside antiviral agents (trifluridine). The Committee noted that aciclovir was well tolerated. The Committee noted that aciclovir ointment has been approved by several stringent regulatory authorities and is available as a generic preparation, while idoxuridine has largely been removed from the market. The current cost of aciclovir ointment is variable (from US\$ 0.25 to US\$ 23.00 per tube) and its inclusion on the Model List may lead to further reductions in price. As the evidence provided in the application supports the public health need, effectiveness and safety of aciclovir ophthalmological formulation, the Committee recommended that aciclovir ointment 3% W/W be added to the core Model List for treatment of ocular surface disease caused by herpes simplex virus.
