

Section: 4. Antidotes and other substances used in poisonings > 4.1. Antidotes and other substances used in poisonings > Non-specific

ATC codes: V03AB01

| | |
|--------------------------|--|
| Indication | Unspecified injury, poisoning or certain other consequences of external causes ICD11 code: NF2Z |
| Medicine type | Chemical agent |
| List type | Core |
| Formulations | Oral > Liquid: 0.14% ipecacuanha alkaloids calculated as emetine |
| EML status history | First added in 1979 (TRS 641) Removed in 2003 (TRS 920) |
| Sex | All |
| Age | Adolescents and adults |
| Therapeutic alternatives | The recommendation is for this specific medicine |
| Patent information | Patents have expired in most jurisdictions Read more about patents . |

Summary of evidence and Expert Committee recommendations

The Committee noted the lack of need for an emetic in the treatment of poisoning due to the risk of aspiration pneumonia, and the absence of evidence on the efficacy and safety of ipecacuanha in the management of poisoning. The Committee further noted that ipecacuanha is not included in the International Programme for Chemical Safety (IPCS) INTOX databank and thus recommended that it be deleted from the Model List.
