

Section: 4. Antidotes and other substances used in poisonings > 4.1. Antidotes and other substances used in poisonings > Non-specific

Codes ATC: V03AB01

Indication	Unspecified injury, poisoning or certain other consequences of external causes Code ICD11: NF2Z
Type de médicament	Chemical agent
Type de liste	Liste de base
Formulations	Oral > Liquid: 0.14% ipecacuanha alkaloids calculated as emetine
Historique des statuts LME	Ajouté pour la première fois en 1979 (TRS 641) Retiré en 2003 (TRS 920)
Sexe	Tous
Âge	Adolescents et adultes
Équivalence thérapeutique	La recommandation concerne ce médicament spécifique
Renseignements sur le brevet	Patents have expired in most jurisdictions Lire la suite sur les brevets.

Résumé des preuves et recommandation du comité d'experts

The Committee noted the lack of need for an emetic in the treatment of poisoning due to the risk of aspiration pneumonia, and the absence of evidence on the efficacy and safety of ipecacuanha in the management of poisoning. The Committee further noted that ipecacuanha is not included in the International Programme for Chemical Safety (IPCS) INTOX databank and thus recommended that it be deleted from the Model List.
